Guardian V2 beam Smart Control Kit

Product Compatibility Information

The V2 is compatible with the majority of garage door openers manufactured after 1993. However, some garage door opener manufacturers have incorporated an encryption on their push button control input that prevents non-proprietary products from working with their openers. The V2 will not work on the serial encrypted models.

A list garage door openers compatible with the V2 is below:

- All Allstar®, Hörmann®, Linear®, Lynx®, Marantec®, Martin®, Moor O Matic®, Skylink®, Sommer®, Stanley®, Wayne Dalton® and Xtreme Garage®, models are compatible.
- Chamberlain®: Models without myQ® or Security+2.0™ are compatible
- Craftsman® Series 100, 53XXX series & models without AssureLink® are compatible (3043, 30437, 54XXX series, 57915 and 57918 models are not compatible)
- Genie® models other than Series III Models, PowerMax® 1500, TriloG 1200 & 1500 and IntelliG® 1000 & 1200 are compatible
- Overhead Door® models other than Series II & Series III are compatible
- LiftMaster® models without myQ® or Security+2.0™ are compatible
- Raynor® models without myQ® or Security+2.0™ are compatible

The above list is intended to be a guide. If there is some uncertainty whether your garage door opener is or is not compatible with the V2, please contact Guardian Tech Service at 1-424-272-6998

The beam Smart Control Kit should be used only on sectional doors and with garage door openers made after 1993 with a photo-eye safety system.
